

**Reduce
the risk of
serious
injury**

REDUCE THE RISK OF SERIOUS INJURY with the award winning BladeStop, featuring the fastest stopping time on the market.

- Stops the blade in 0.009 seconds
- Fast reset/restart capability – no blade change required after an emergency stop

BladeStop reduces the risk of serious injury by stopping the bandsaw blade within a fraction of a second.

SCOTT'S BladeStop™ bandsaw, available worldwide, is uniquely designed to reduce risks of serious injury by mechanically stopping the bandsaw blade when the unit senses that a person has come in contact with the blade.

Upon sensing contact with the operator, the blade stops within 9 milliseconds (with proper maintenance and service). This can be a huge difference between having just a small skin cut or an amputation.

GloveCheck™, an optional secondary sensing system, detects operator gloves moving at high speeds in a zone directly upstream from the saw blade. Upon a zone infraction, the BladeStop ceases blade operation within 9 milliseconds.
